

BHAUSAHEB MARKANDE

Data Engineer

Pune, Maharashtra, India | +91 8087023351 | mbhausah01@gmail.com

PROFESSIONAL SUMMARY

Data Engineer with 1+ years of experience designing and delivering scalable ETL/ELT pipelines on AWS and Azure. Skilled in Python, PySpark, SQL, AWS Glue, Lambda, Step Functions, S3, Redshift, Snowflake, Azure Data Factory, and Databricks. Proven track record in data validation, data migration, data modeling, and building cloud-based data warehouses that support real-time BI reporting. Experienced in incremental data loading, workflow automation, data governance, and cross-functional collaboration with HR and business stakeholders to deliver data-driven analytics solutions.

CORE SKILLS

Programming & Query Languages: Python, SQL, PySpark

Cloud Platforms: AWS (S3, Glue, Lambda, Step Functions, Redshift, Athena, SNS, SQS, SES, EventBridge, Kinesis, SageMaker, IAM, Lake Formation, CloudWatch, QuickSight), Microsoft Azure (Data Factory, Data Lake Storage Gen2, Databricks, Synapse Analytics, Functions, Blob Storage, Logic Apps, RBAC, Monitor, Virtual Machines)

Big Data & ETL: Apache Spark, Apache Hadoop, Apache Kafka, ETL Development, Data Pipeline Development, Data Migration, Incremental Loading, Data Cleaning, Data Validation

Databases & Warehousing: Amazon Redshift, Snowflake, Microsoft SQL Server, Amazon RDS, Data Warehousing, Data Modeling, NoSQL, Unity Catalog

BI & Visualization: Microsoft Power BI, Amazon QuickSight, Data Visualization, Business Intelligence

DevOps & Tools: Git, Jenkins, CI/CD, Cloud Computing

Data Formats: CSV, JSON, Parquet, Delta Lake

PROFESSIONAL EXPERIENCE

Data Engineer — ITC Infotech

Jun 2025 – Present

Project: Workforce360 – Intelligent Workforce Analytics Platform | Client: Confidential (USA)

- Designed and developed scalable ETL pipelines using AWS Glue, AWS Lambda, AWS Step Functions, and SSIS to centralize employee data from 5 HR systems (HRMS, Payroll, Attendance, Recruitment, Performance Management) into a single warehouse.
- Extracted and ingested 10K+ employee records from multiple HR source systems into Amazon S3, standardizing formats across CSV, JSON, and Parquet.
- Performed data cleansing, validation, transformation, and deduplication using PySpark and Python, improving data accuracy by 15% and eliminating 500+ duplicate/erroneous records.
- Implemented incremental data loading to process only new and modified records, cutting pipeline execution time by 40% versus full-refresh loads.
- Developed and optimized SQL scripts and stored procedures, reducing data load time into the SQL Server Data Warehouse by 30% and supporting 20+ downstream reporting tables.
- Designed fact and dimension tables within the SQL Server Data Warehouse, enabling reporting across 25+ workforce KPIs for enterprise stakeholders.
- Built 8+ interactive Power BI dashboards delivering real-time insights on workforce trends, payroll, attendance, recruitment, and performance, used by 30+ HR and business stakeholders.
- Monitored ETL jobs using AWS CloudWatch and automated multi-step workflows with AWS Step Functions, reducing manual intervention and job failures by 35%.

- Implemented data security and access controls using AWS IAM and AWS Lake Formation across 50+ data assets, ensuring 100% compliance with organizational data governance policies.
- Partnered with HR and business teams across 15+ requirement-gathering sessions to translate reporting needs into scalable analytical solutions.

ACADEMIC PROJECTS

Crime Rate Prediction and Analytics System — SPPU University	Jun 2025 – Jun 2026
• Built Azure Data Factory (ADF) pipelines to automate end-to-end ingestion and orchestration of 100K+ crime records across 10+ workflows. • Designed and implemented a Bronze-Silver-Gold data lake architecture in ADLS Gen2, improving data organization and query performance by 30%. • Performed data cleaning, transformation, feature engineering, and validation using Azure Databricks (PySpark) on a dataset of 100K+ records. • Trained and evaluated an LSTM machine learning model to predict crime rate trends, achieving 85% prediction accuracy. • Stored processed and prediction datasets in ADLS Gen2, supporting downstream analytics for 10+ reporting use cases. • Developed 5+ interactive Power BI dashboards for crime analysis, trend visualization, and prediction insights. • Performed data quality checks and validated model prediction outputs, maintaining 95%+ data accuracy across the pipeline.	

EDUCATION

Bachelor of Engineering (BE), Computer Science and Engineering — SPPU University	2022 – 2026
<i>Pune, India</i>	

AWARDS & CERTIFICATIONS

- Outstanding Project Presentation Award — Final Year (June 2026)

LANGUAGES

English, Hindi, Marathi
